# How to upgrade from v5 to v6?

ElecRoc 6 uses license code to authorize the program. Customer must send the old physics dongle of v5 back to Founder, Beijing China. Below are the steps to upgrade.
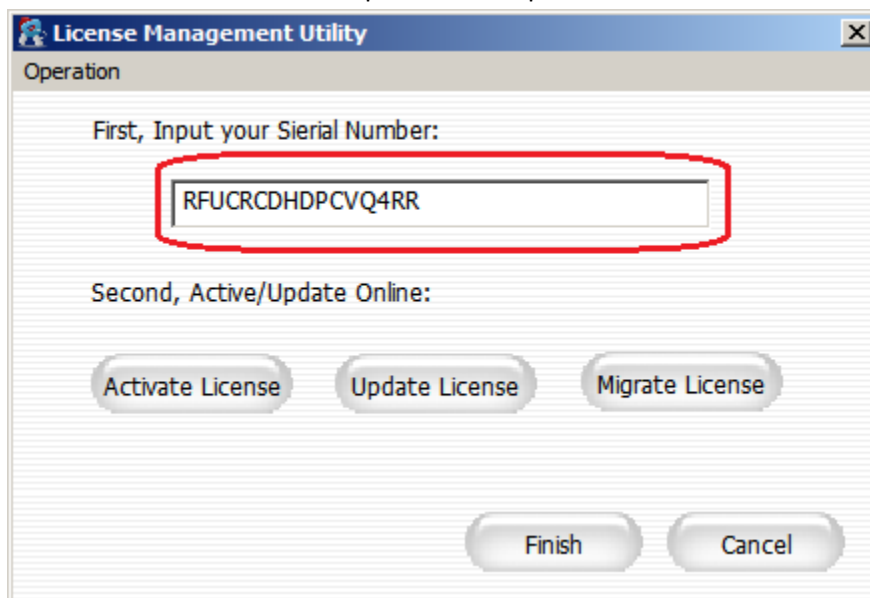

1. In ElecRoc 5, backup all the jobs, archive all templates and other resources from Client\Tools\Backup Manager & Archive Manager;

2. Uninstall ElecRoc 5 server from Start\Control Panel\Programs and Features, and then delete all the installation folder of v5.

3. Install Windows operating system (English version) on a fresh disk, you must format the hard driver while installing OS, as following.

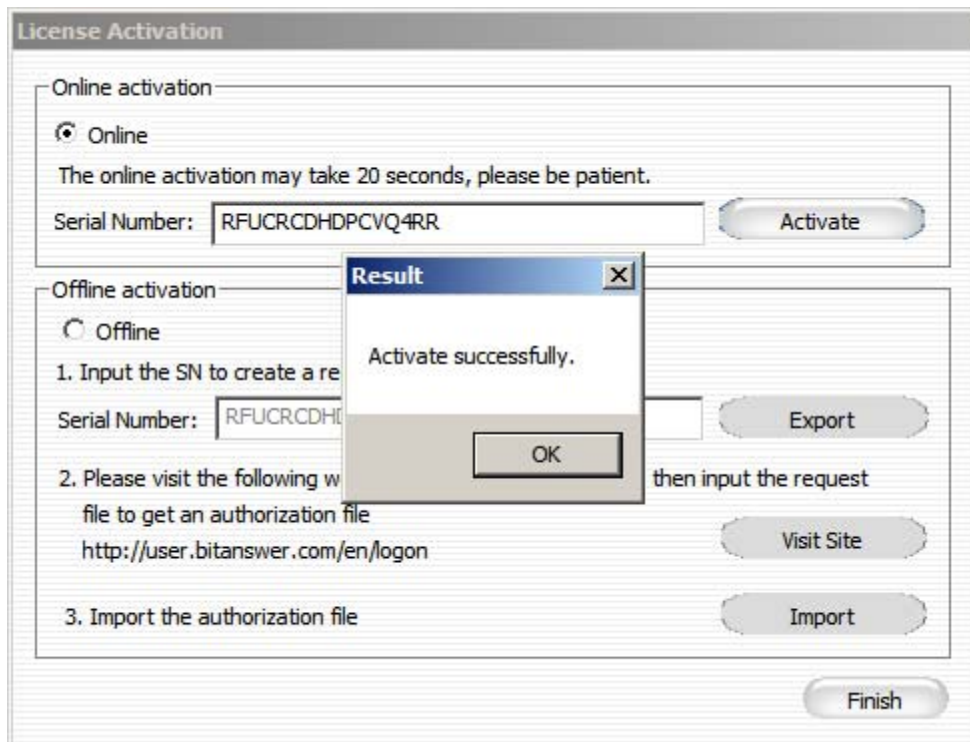

4. Change the computer name to an easy name.
5. Set up the configuration of Windows OS such as FireWall, UAC, IIS, .netframework 3.51 according to the installation guider from DVD\manual.
6. Install ElecRoc server on the computer.
7. Select License Code as following appears.

8. Input the serial number, click **Activate License**, then click **Activate** on the new page, and wait until the *Activate Successfully* appears, click **OK**, as following, and please refer to the document of *How to authorize ElecRoc 6.*pdf at this step.
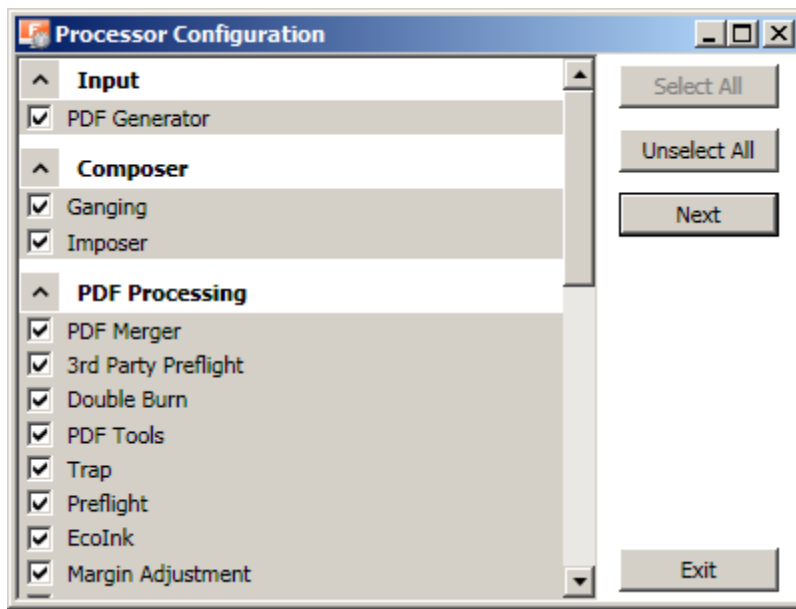

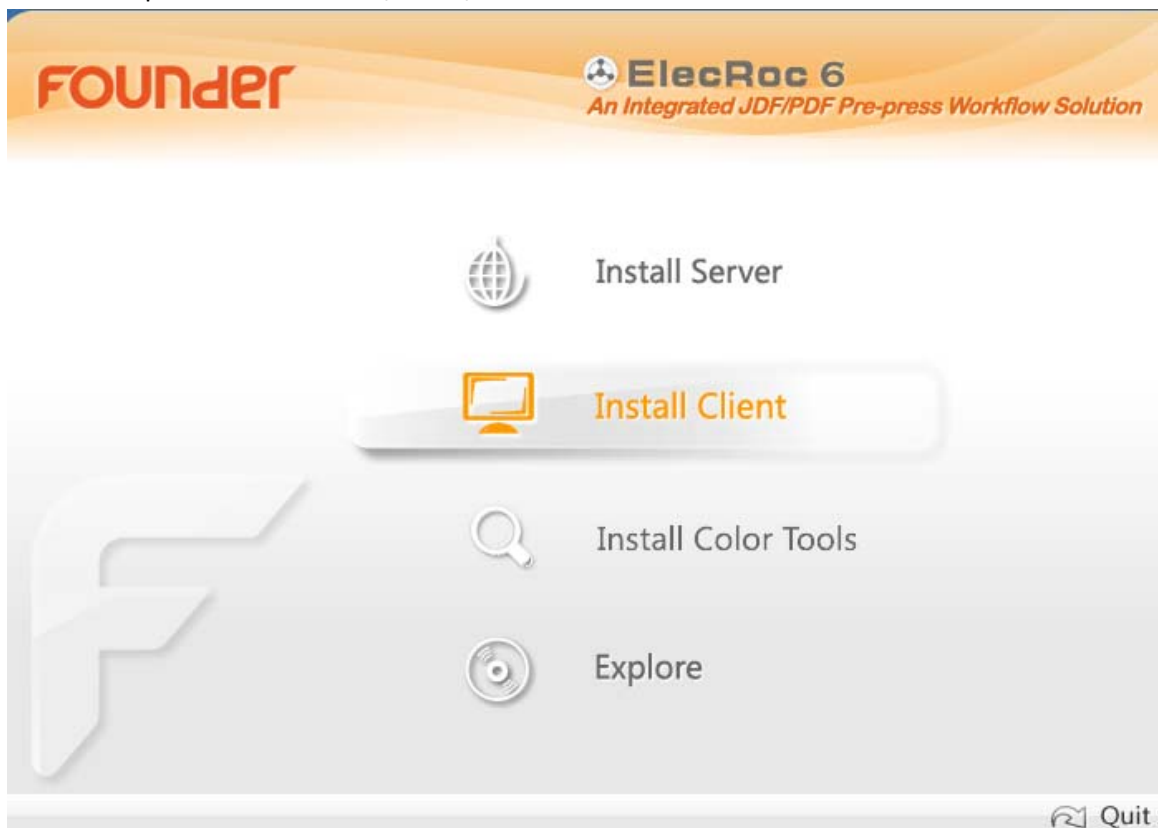

9. Click **Finish**, and wait until next page appears. It takes about 20 seconds or more.

10. Configure the modules which authorized by the license code.

11. Click **Install Client** on the server computer or on another PC computer after clicking autorun.exe, or click setup.exe from installer\Client\PC.

12. Finishing installation, input client name on server from Server\Settings\Authorization. And then restore the jobs back to v6.
